Ability to provide detailed planning to accomplish project goals. Ability to work independently. Ability to plan, direct, and implement multiple and concurrent projects. Occasional overnight in-state travel will be required. The ideal candidate for this position will possess a broad range of knowledge regarding web application development, database application software design and the ability to utilize software development life cycle methods/principles in software development (specifically, Agile Software Development). The ideal candidate will work with the software development team on resource allocation, and express expert programming knowledge to meet the agency's software development needs. The technical skills and tools utilized in this position will be Django Web Framework, Python programming language, HTML5, Javascript, CSS, SQL Server, and PostgreSQL database environments.

POSTING DETAILS:

Position Location:

City: Little Rock, Arkansas

Office: Little Rock Office Complex (Telecommuting is available)

Division: Information Technology

Job Summary:

The Software Support Specialist is responsible for developing computer applications from detailed requirement specifications. This position is governed by state and federal laws and agency policy.

Typical Functions:

Writes or follows a program specification using structured code to develop an application software program to production status.

Responds and assists users with questions and concerns relating to a particular area, such as hardware, software and network stations.

Develops and maintains current expertise in a variety of application software packages.

Installs, configures, and maintains network, hardware, and software at various levels, and tests and debugs programs as necessary.

Prepares program logic layout, data flow outlines, and narrative descriptions in developing applications.

Evaluates and makes recommendations for necessary adjustments to applications to satisfy user requirements, and provides recommendations on the purchase of user hardware/software.

Assists in planning, preparation and conducting seminars on software, hardware, network, or other computer related topics.

Specific Duties and Responsibilities:

The Software Support Specialist will serve as a subject matter expert on all custom software developed by the AGFC Software Development Team. The team designs custom software solutions for the agency's various divisions and provides support for all custom software solutions developed. Their main responsibility is to function as a member of the development team providing insight and experience. This individual will become familiar with all existing software and architecture while continuing to push for the upgrade of legacy applications, he/she will assist in the development of new applications and provide technical/user support related to these technologies and assist in maintenance.

Certificates, Licenses, or Registrations:
